LAWSONS ANGUS CONTACTS

Harry Lawson 0407 101 145 lawson.h@lawsonsangus.com.au

WELCOME TO OUR EARLY ROMA SALE 2015

Welcome to Lawsons Angus 2015 Roma Sale, which will be held at the Roma Sale Yards at 1pm, Friday 14 August and conducted by Landmark. At this year's Sale we are offering 70 rising two-year old Angus bulls, all ready to go to work!

To some extent, in Bull Sales like this we are mostly preaching to the converted, those that do 'get it' and understand the difference between phenotype and genotype (underlying genetic potential). So for those who do 'get it' we apologise for belting the performance message. This is not just about marketing Angus; it is about a philosophy and disciplined approach to selection and genetic improvement for northern beef herds.

I attended Beef 2015 in Rockhampton, a fantastic event which was well organised, and the Brahman National Sale in Rockhampton in 2014 and to me the information provided hasn't changed since the last one I went to twenty years ago! Nevertheless, I am always eager to learn and comments like "Frank has a top bull this year" sparked my interest, but when I looked at Frank's bull it is a large framed Brahman tethered by a halter with a high daily gain and no EBVs or contemporary group comparison. The bull has been targeted for the National from a very young age and fed accordingly. I'm sure you've all seen this over and over…Breeders 'in the know' sell to each other and in so doing, this marketing of 'elite' genetics becomes self-perpetuating. Yes, I agree there are some breeders doing a great job and we should champion these breeders instead of finding fault.

Looking in from the outside as a 'southerner', I believe there has to be a large quantum shift in the approach and thinking of the northern commercial Beef Industry to drive change through the northern genetics Industry. It is an outdated model with little commercial accountability to the northern breeder's (the customer's) bottom line. In fact, Frank's large framed, high growth Brahman sire is almost certain to have daughters that are higher maintenance and less fertile than those he was breeding 20 years ago.

So what can breeders like us do to change this approach?

Firstly, we have to acknowledge we are doing a poor job getting our message through, but one thing that keeps us going is we know 'Science not Fiction' works. The feedback from our northern clients and the performance of Lawsons Angus clients in Australia and overseas keeps us motivated.

The benefits of a Lawsons Angus bull includes greater survivability in the north. Lawsons Angus bulls are tougher and hardier than most Angus.

Our business is not just about breeding elite performance genetics for commercial breeders, but also providing reliable, predictable information that breeders can count on to make good decisions. This information can be used to answer key questions when selecting a bull:

1. How do I select heifer bulls?
2. How do these bulls compare with other Angus bulls in other sales?
3. How do they compare with the bulls I purchased last year and in my current bull team?
4. How will these bulls help me increase ADG, reduce turnoff time, increase my fertility, increase the MSA and carcase value, and increase my feedlot performance?

All of these questions can only be answered by using Breedplan information. It is simple, the breeders that 'get it' will make faster genetic gain and get much greater value out of their investment in genetics than those that do not use this information.

Angus cross are making significant premiums in the north.

We maintain if you are going to use Angus over high content Brahman or Bos Indicus females then in most cases you should use straight Angus to get the best performance-kick in the F1 progeny. Most Brangus hybrids currently in the north are using outdated, 'watered down' Angus genetics that are not going to give you increased adaptability, increased performance or increased carcase value compared to a Lawsons Angus bred sire.

OUR BUSINESS IS NOT JUST ABOUT BREEDING ELITE PERFORMANCE GENETICS FOR COMMERCIAL BREEDERS

We can offer breeders custom breeding options if they want to maintain some level of adaptability or Bos Indicus in their herd, which we understand is a requirement for a big chunk of Queensland. We are not advocating that people in the north should run straight Angus cows, we are simply saying that in many instances using a high genetic merit performance-bred Angus bull, properly acclimatised and not over-fed, is a better option than using a Brangus or Angus derivative bull as most of these are not backed by the same level of performance, plus heterosis advantages of their progeny will be lower compared to the F1 Angus-Brahman cross.

We hope to encourage new and existing clients to come and view this year's Sale bulls; they are a powerful group of two year old bulls that represent the top end of the Angus performance breed.

We are happy to discuss the best way to utilise Angus in the north and offer breeding advice and back-up to any of our clients as well as custom breeding options.

Regards,

Harry Lawson

SALE CONDITIONS

BUYERS REBATE

Rebate of 2% is available to outside agents settling on behalf of buyers within 7 days providing buyers are introduced via email to lawsons@lawsonsangus.com.au or in writing prior to Sale day, or arrangements are confirmed on bidding cards on Sale day.

DELIVERY OF SALE BULLS

Lawsons Angus and Selling Agents will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Buyers must organise cartage of bulls at their own expense.

REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request. Non transfer commercial bulls are denoted 'NT' or 'COM' status.

3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for structural soundness and fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge.

If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. Provide you with a satisfactory replacement if available, or
2. Issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

7 IN 1 AND VIBRIO STATUS OF SALE BULLS

Bulls exposed to reproductive diseases such as Leptospirosis and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing.

All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1 and Vibrovax. The bulls have also been vaccinated for tick fever and 3-day sickness.

Brahman cows with Angus calves

A BRIEF DESCRIPTION OF EBVS AND $INDEX VALUES

The following is a brief description of EBVs and $Index values and Accuracies. For a more detailed explanation please refer to Angus Society of Australia web site (www.angusaustralia.com.au).

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

CALVING EASE DIR (%) Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

CALVING EASE DTRS (%) ~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS) ~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG) ~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300kg carcase.

INTRA-MUSCULAR FAT % (IMF%) ~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300kg carcase.

ANGUS BREEDING INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

DOMESTIC INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

HEAVY GRAIN INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

HEAVY GRASS INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers.
