“MORE FERTILE COWS, RELIABLE
HIGH ACCURACY CALVING
EASE, FASTER GROWING,
MORE EFFICIENT CALVES AND
SUPERIOR CARCASS TRAITS.”

Harry Lawson

— HARRY LAWSON

It has indeed been a cold wet winter across much of East coast Australia. Fortunately our boys are bred to be tough!

2022 SPRING SALE

79 ANGUS BULLS IN VIC
31 ANGUS BULLS IN NSW*

1PM FRIDAY 16TH SEPTEMBER

AT CLAREMONT, 233 COONANS RD
YEA, VICTORIA.

*NSW bulls will be sold at Claremont (interfaced via Auctions Plus), but are located in NSW.

WELCOME TO OUR 2022 VICTORIAN AND NSW SPRING SALE

WELCOME TO OUR 2022 VICTORIAN AND NSW SALE AT 1PM
FRIDAY 16TH SEPTEMBER, HELD AT CLAREMONT, YEA,
VICTORIA AND BOOROWA, NSW.

THIS YEAR'S BULLS ARE SIRED BY THE WORLD'S LEADING PERFORMANCE ANGUS SIRES.

The first 79 Lots will be sold through the ring at "Claremont", Yea and Interfaced with Auctions Plus followed by the 31 NSW bulls that Brian Leslie and DLS will auction from Yea with these bulls physically located at Boorowa NSW.

This year we have catalogued the yearling bulls in their management groups first and then sorted by sire group/tag number. So please note the bulls are not sorted in best to worst. The first two management groups (79 bulls in total) are located at Yea, Victoria and the balance of 31 bulls are located at Boorowa, NSW on the property "Box Range" owned by Vince and Debbie Rheinberger. These NSW bulls are bred on-farm at Boorowa under a long-term Co-operator program which runs under the same disciplined genetic and selection systems that we apply across our nucleus and co-operator herds.

These bulls are unique in their balanced performance across all major traits. The bulls are in optimal zones for calving ease, rapid early growth, moderate maturity pattern and elite carcass. These 100+ bulls are the highest ranked bulls to be sold this Spring for both Heavy Grain Index (GN+ or GRN) and Angus Breeding Index (\$A), top 6 and 8% average respectively. This Sale also includes our first offering of GAR Home Town sons, the next big impact sire to hit town!

Home Town's elite proven genetic predictions for calving ease, growth, stature, feed efficiency and product excellence and maternal function are in the most unique combination ever seen in an Angus sire.

Other main sire groups include GAR Ashland, Lawsons Momentous M518, GAR Quantum, Lawsons Miraculous Q44, GAR Genuine and Clunes Dusty M13.

THIS YEAR'S BULLS ARE SIRED BY THE WORLD'S LEADING PERFORMANCE ANGUS SIRES.

Elite ET breed heifers at Gardiner Angus Rnch (GAR), Ashland Kansas, June 2022

COW SIZE IS SOMETHING COMMERCIAL BREEDERS SHOULD CONTROL, NOT THE SEEDSTOCK BREEDERS OR SEMEN RESELLERS

Lawsons Angus are one of the only large scale Australian seedstock herds that is below average on Mature Cow Weight (MCW). It's somewhat perplexing and in our view a worrying trend that the Angus breed is still transfixed on growth. Cow size is actually one of the easiest traits to measure and control, it's also the one that takes the most discipline to keep in check as many of the 'new beaut' bulls with fancy photos have loads of growth but fall down on our multi-trait criteria. We know cow size is directly linked to dry matter intake (DMI) and whatever way people reconcile this it's an undeniable fact that bigger cows are a higher risk in tough years.

BREEDING FASTER GROWING CALVES DOES NOT MEAN YOU HAVE A LOWER CARBON FOOTPRINT.

Cows are the largest part of feed costs and are also the largest greenhouse gas (GHG) emitters in any beef breeding enterprise. Most of our commercial clients run cattle under high stocking rates and/or under highly variable seasonal factors with minimum supplementary feeding so they need cows that have the flexibility to work hard with a short post-partum anoestrus interval (PPAI).

The work we have been doing over the past few years in our feed efficiency testing unit enables us get an accurate view of the key drivers of both economics and emissions intensity (kilograms methane per kilograms of beef). Keep in mind that really the most important and best way to reduce your carbon foot print (as defined by emissions intensity) is to keep your cows moderate and ensure fertility remains your priority.

The reason we place so much emphasis on MCW and keeping our cows moderate is we believe an average Angus cow is big at around 650kg in our production system and that MCW is the biggest driver of feed costs, drought resistance and an animals carbon footprint. We like the fact that lowering our emissions is also aligned with economics and sustainability. Given we have the tools to produce fast growing progeny from these moderate cows that reach heavier carcass weights at a younger age we simply don't agree with the fixation by the Industry that more growth equates to more profit. Cow size is definitely something to prioritise, semen resellers and seedstock producers do not pay your feed costs.

Calving ease is also one of the single most important traits for any beef producer from both an animal welfare and economic perspective. We do our best to provide our clients with the most accurate and up to date advice on calving ease suitability of our bulls. Anything that has a calving ease tick (red tick) we are extremely confident is suitable for heifers and in this catalogue there are 96/110 (87%) rock-solid calving ease bulls.

These are exciting times in the Beef Industry so let's use this time to make good long term decisions to set our breeding herds up for the future. Clean out your old bulls, keep lots of heifers and enjoy the benefits of taking your herd to a new level of productivity.

Regards,

Harry Lawson

I WAS FORTUNATE TO ATTEND THE BEEF IMPROVEMENT FEDERATION (BIF) CONFERENCE IN EARLY JUNE 2022 AT LAS CRUCES, NEW MEXICO AND I VISITED SOME INTERESTING RANCHES AND FEEDLOTS IN NEW MEXICO, TEXAS AND KANSAS.

I ALSO VISITED ONE OF VYTELLE'S NEW IVF EMBRYO LABS AND EMBRYO COLLECTION CENTRES AND THIS TECHNOLOGY WILL OPEN UP MORE OPPORTUNITIES TO ACCELERATE GENETIC PROGRESS GLOBALLY.

BIF is an opportunity to try and keep up with new animal breeding research and the big challenge for us is to sort this research into priorities and think about the potential applications and benefits to our clients. It's a big academic workout and also an opportunity to visit with many friends and colleagues.

Next year's BIF Conference is in Calgary, Alberta, Canada July 3-6th just prior to the Calgary Stampede and I would recommend this for any progressive beef producer. Please feel free to discuss with me if you are contemplating making the trip next year.

My US trip also included a few days at Gardiner Angus Ranch (GAR). We always try to go to the US with a wide lens but there is no doubt GAR are the leading Angus seedstock herd in the world and we are very fortunate to have a 30 year partnership and friendship with the Gardiner family. It is largely what keeps us and in turn your breeding herds at the forefront of multi-trait excellence with unmatched end-product value!

Gardiner's were a founding shareholder in US Premium Beef that are now one of the largest beef processors in the US. Over 2021 and start of 2022 they have processed and collected data on 4,297 GAR influenced steers and heifers and these animals averaged \$188 per head premium and 42% graded US Prime (equivalent to an AusMeat marble score 5). The superior carcass you see on these Sale bulls have the potential to produce similar results as we have recorded in our own branded beef trials. This years' Roma Sale bulls average in the top 10% for marbling (IMF) and Eye Muscle Area (EMA) and across all of the four Australian Angus \$ Indexes

I also recently managed to get back to New Zealand and review some of the exciting grazing and plant breeding work they are doing, they keep finding new ways to innovate and find productivity gains. I still feel NZ leads the way in pasture and grazing systems and the US are world leaders in genetics. Our job is to try and learn from the best globally including the top end of producers and researchers in Australia and apply that to our own farming and genetics programs across Australia.

Opposite: Harry and Greg Gardiner at the Gardiner Angus Ranch.

SELECTION FOR FEED EFFICIENCY

OUR VICTORIAN FARM AND HEADQUARTERS INCLUDES OUR VYTELLE (FORMERLY GROWSAFE) FEED EFFICIENCY TESTING AND RESEARCH STATION.

We have now been testing bulls for over two years and have established a very good baseline data set and have the ability to rank all current sires for a range of feed efficiency traits, including Net Feed Intake (NFI).

This data is included in Vytelle's global genetic evaluation analysis so we can see where our bulls fit in the global population. We have also used linked sire to the Angus Sire Benchmark Program (ASBP).

We will continue to test cohorts and utilise this information in our breeding decisions. Long term we believe we can improve net feed efficiency (NFI) by 20%, which will be important for our cost of production but also to reduce our greenhouse gas (GHG) emissions as part of our longer term business and genetics plan.

We are the only Angus stud in Australia that have their own on-farm testing station and have made a good start at shifting the bell curve in feed efficiency. Measuring and evaluating the economic impact of genetic change when we put selection pressure on feed efficiency is an important competitive advantage for Lawson Angus now and in the future.

Above: Bulls feeding through the Vytelle system at Claremont

We are measuring significant variation and differences between sires and individual bulls and we recognise there is lots of room for genetic improvement in this independent trait. Please call us to discuss further if you are interested in finding out how we are incorporating feed efficiency into our long term breeding program.

**“IF YOU DON'T MEASURE IT,
YOU CAN'T MANAGE IT.”**

This feed efficiency technology was a significant investment for us and part of a long term strategy to put selection pressure on feed efficiency.

FOR US THIS IS THE MISSING LINK IN IDENTIFYING CATTLE THAT USE FEED (ENERGY) SMARTER.

We know our cattle are at the top of the breed for feed:gain (feed conversion efficiency) and the next step is to identify cattle that meet our tough multi-trait criteria but are also good at Net Feed Intake (NFI). Our GrowSafe system allows us to weigh animals on a daily basis as they drink, so we not only record daily feed intakes we also get weight performance in real time. This is the feedback that has been lacking in beef systems and sets our genetics apart.

We have been able to rank sires and see where they fit in the global Angus population and we are using this information in our mating decisions going forward. The good news for beef farmers is selection for feed efficiency aligns with on-farm productivity and also will help select for animals with a lower carbon footprint (lower emissions intensity).

In terms of genetics we see the ability to accurately measure what individual animals eat and their feed conversion rate as an opportunity to fine tune and rank sires for these important traits – Residual Feed Intake (RFI or NFI), Dry Matter Intake (DMI) and Feed Conversion (FC). We know our genetics (and those sourced from GAR) are amongst the most efficient in the Angus breed. Having this information allows us to make informed decisions about our breeding herd so you can improve the genetic progress and performance of your herd. We will use this data sensibly over time to ensure animals are accountable for what they eat, which is one of the most important factors in beef herds cost of production and profitability.

IGNORE THE NOISE – STAY FOCUSED ON YOUR KEY OBJECTIVES

AS I DISCUSSED WITH MARK GARDINER, GARDINER ANGUS RANCH, KANSAS, EARLIER LAST YEAR OUR PROGRAM (SAME APPLIES FOR GAR) IS BORING IN THE CONTEXT THAT IT IS HIGHLY PREDICTABLE, TRANSPARENT AND SIMPLY INVOLVES IDENTIFYING AND MULTIPLYING THE BEST BULLS WE CAN FIND IN LARGE NUMBERS.

Mark chuckled away as we agreed we are two of the most boring animal breeders on earth! Being disciplined and ruthless in our selection and culling criteria is how we, and in turn you, make consistent, predictable genetic progress, not by chasing one outcross after another. It may be boring to some, but it takes a lot of research behind the scenes, a strong global network and then a lot of hard work to implement. I often think how easy it would be to let the bulls out for a run after two big rounds of FTAI.

One of the big reasons why we don't have the big genetic spread (variation) across all traits is that we have not used follow-up natural mating bulls since 1994. We carefully consider every individual mating, taking into account not only objective data (EBVs, pedigree and inbreeding coefficients) we also use all our knowledge and observations that we make when working cows at calving and AI and on our daily rounds shifting breaks for bulls.

**WE DO OUR PLANNED MATINGS
AROUND WHAT WE THINK IS BEST
FOR OUR COMMERCIAL CLIENTS.**

I hear all the time from other studs “we value phenotype”, (an animals visual eye appeal) is heavily linked and correlated with high levels of feed and/or low stocking rates so the true underlying genetic potential is often masked, especially for important traits like fertility and ability to rebreed and bounce-back after tough years.

If you recall this time last year Angus Australia released a new version of Indexes that amongst other things put greater emphasis on Mature Cow Weight (MCW) in terms of changing the economic weightings to reflect that MCW is directly related to feed costs and 70% of the costs in a cow-calf operation relate to the production of feed and supplementary feeding. This caused some major re-ranking of sires (in a good way to my way of thinking and economic analysis).

However it caused such a backlash on Angus Australia they were forced to withdraw the new Indexes and have only just released the latest assortment of Indexes in December 2021 (they were released earlier as trial Indexes). Angus Australia have released a low feed cost version of all the major indexes.

Above: Mark and Henry Gardiner, Gardiner Angus Ranch.

See below this extract from Andrew Byrnes in press release dated 26 November 2021 **“Introducing New Angus Selection Indexes”** (full version available on ASA web site).

“Low feed cost versions of each selection index have been introduced to cater for Angus breeders who are running a production systems where pasture is not fully utilised for the majority of the year, or where the cost of supplying additional feed, via either supplementary feeding and/or increased pasture production, is low.

In these production systems, if there is an increase in the maintenance requirements of the breeding herd due to an increase in mature weight, minimal additional costs are incurred.

The low feed cost selection indexes do not consequently aim to limit an increase in mature cow weight, while improvement in other production traits is achieved, which is an objective in the other versions of these selection indexes.”

This shows that there is a strong "movement" within Australian Angus breeders to focus on growth without consideration for mature cow size. It truly shows the disconnect between the seedstock Industry and the commercial Industry. All I will say to this is we will stay focused and try to work with seedstock herds that do understand that feed costs and having a productive, efficient cow herd is the backbone of any beef enterprise and that meat quality (marbling) and yield is important in and let the market decide which direction the Angus breed goes in.

– Harry Lawson

HOW DO LAWSONS ANGUS SPRING BULLS COMPARE WITH THE ANGUS BREED AVERAGE?

■ Lawson's 2022 Sale bulls
 ■ Breed average

These spring sale bulls excel across all key economic traits. They are unique in their balance of calving ease, high growth, moderate cow size and unmatched muscle and high marbling potential.

DEVELOP YOUR OWN SIMPLE 10 YEAR PLAN

Using Lawsons Angus genetics will provide a highly predictable path to keeping you a decade ahead of the average Angus breeder.

Lawsons Angus breeding program is built on multiplying the best bulls available in the world. Sire-Mate helps breeders develop a simple, but still flexible mating plan that minimises inbreeding and maximises genetic gain.

GAR HOME TOWN

Home Town sold for a record US\$475,000 in the GAR 2020 Spring Sale and is marketed through Select Sires and World Wide Sires. These 17 Home Town sons selling in this Sale represent the very top end of the Angus breed so please judge them on their genetic potential, often we can underestimate the genetic merit in these yearling bulls. Many of the Home Town Sale bulls are bred out of two year old Momentous daughters; you have access to two of the breed elite sires in the one genetic package. These Home Town bulls are truly unique for calving ease, early growth, stature and maternal function. Sometimes in animal breeding you have to wait and let these true outlier bulls rise to the top and we are fortunate that we have Gardiner Angus Ranch that pursue the same multi-trait disciplined approach to breeding superior cattle in large numbers. The large scale GAR embryo transfer program and diligent recording and carcass data allows us and our clients to move at the same pace as the best Angus herds in the world.

Great way to start of the Sale with ten GAR Home Town sons, the first seven are out of Momentous two year old heifers and the next three out of Kodak cows. Multiplying the best proven genetics in the world is backed up with the what you see in this Sale! No other seedstock herd offers the numbers and unique multi-trait balance that you can source from any one of our Sales. S5001 ranks in the top 2% of the breed for Heavy Grain Index (GRN) and top 5% for EMA and IMF.

S5018 represents the top end of Angus genetics on a global basis combining Home Town x Momentous and boasting an incredible genetic profile in every key economic trait including end product value. Powerful curve bender with a >130 600D and elite end product combination of muscle and marbling to hit the top end of any grass or grain fed grid. S5018 is the equal #8 ranked Heavy Grain Index (GRN) bull in the Sale, top 1% of the breed for GRN and EMA, top 5% for IMF.

Cows and Calves thriving at Cobwell Station, Barham.

GAR ASHLAND

GAR Ashland is a good outcross for most and one of the high use sires across the US and Australia. Visually attractive and unmatched in his combination of calving ease, growth, marbling and muscle. No other sire we have used have this much muscle in such a stout, moderate frame. Ashland is the sire of GAR Home Town.

These Ashland sons have massive horsepower in a moderate maturity pattern and elite end product value. Hard to believe we can now routinely produce bulls that are >130 on 600D and still breed average MCW, it's only possible with a disciplined multi-generational approach and our 100% AI/ET PLANNED BREEDING PROGRAM. The #5 ranked Heavy Grain Index (GRN) bull in the Sale, top 1% of the breed and top 10% for IMF.

We really should stop complaining about the heat in Yea in summer. Andrew Donoghue (Vytelle) and I melting at Red Doc Ranch Albuquerque.

LAWSONS MOMENTOUS

Lawsons Momentous M518 is currently the #2 most widely used bull in the breed and compliments many of our other sire groups. No other sire in the Angus breed matches Momentous for muscle and marbling with >13 EMA and +5.0 for IMF. Momentous bull calves have been breaking records across Australia, we have over 1,000 of his 2,500 registered calves so in our program giving you the power numbers to select from with superior genetics at an affordable price. It was pleasing to see his spread between 600D and Mature Cow Weight (MCW) widen with his MCW now +89 and well below breed average of +100. Apart from Momentous unmatched multi-trait excellence his calves are wide-topped, thick set with exceptional docility and structure. We now have 3-year-old Momentous cows in the herd doing a superb job. Momentous is now deceased after injuring himself and we would like to thank Genetics Australia along with our WA owners of Momentous, Blue River Grazing and Collins Brothers that recognised the potential of Momentous as a young sire.

The only direct Momentum son in the Sale, S5103 ranks in the top 10% of the breed for EMA, top 5% for IMF.

Banjo has the Border Collie loyalty and work ethic and George is a Jack Russell with a big sense of entitlement.

GAR QUANTUM

A new GAR sire we purchased semen exclusively in 2019 and one of the most exciting sire prospects from Gardiner Angus Ranch. A son of Momentum, with similar EMA (top 1%) to Momentous and Momentum and top 10% for marbling (IMF). Quantum has more growth than both Momentum and Momentous and progeny excel across the board with excellent structure and docility.

2022 Autumn Vic Sale

LAWSONS MIRACULOUS

A game changing sire in terms of calving ease, muscle and feed efficiency! Lawsons Miraculous Q44 is the highest HBR sire in the Angus breed for Eye Muscle Area (EMA) at +19.7 and his progeny are visually wide-topped, stout with impressive performance and feed efficiency. Miraculous was one of the highest feed efficiency tested bulls in Cohort #4 being above average for every metric including Net Feed Intake (NFI). He was the top selling bull in our spring 2020 Sale, purchased by TRT Pastoral in King Island and used by AI in their large scale heifer program. Semen is marketed through Genetics Australia. Miraculous's is first progeny that were tested this year in our feed efficiency testing unit and he now ranks in the top 37% for Net Feed Intake in the Vytelle global database.

Dwayne Ferrari and Michelle Muller, hard at work at Claremont, Yea.

GAR GENUINE

GAR Genuine is another new outcross sire we selected on our last trip to the US in 2019 where he is one of the elite Select Sires bulls and marketed through Genetics Australia. Big time spread with +10.4 CED and +135 for 600D. Progeny are long bodied, attractive and suit mating with all our major sire-groups.

We regard any bull with a >130 600D and sub +110 MCW to be exceptional. Getting that balance right takes some discipline as the Angus breed keeps pushing forward with more and more growth with seemingly no acknowledgement of the higher feed inputs and risk of reproductive crash in tough seasons. Preparing your herd for the tough years is probably the single biggest risk mitigation genetics and management strategy we can do as a business. Not many get the balance right in our experience at a seedstock level. S5219 ranks in the top 10% of the breed for Heavy Grain Index (GRN).

A powerful attractive Momentous son, lots of growth and high marbling potential. Equal #8 IMF bull in Sale, top 2% of the breed along with plus top 10% for Heavy Grain Index (GRN). S4067 is the second youngest bull in his contemporary and weighed 500 kgs at 10.5 months of age and recorded an actual EMA san of 94 sq. cm and a scrotal measurement of 43 cm.

S4067 is a 3/4 brother to record breaking yearling bull Lawsons Rocky R4010, sold last year for \$132,000 to Breeder Genetics, Knowla Livestock, Dunoon Angus, Kelly Angus and Gilmandyke Angus. Dam, Lawsons Judd P4005 is an absolutely amazing cow; born in the depths of severe drought she went into calf first round AI and just had her third calf in a row with first round AI! P4005 ranks the top 1-4% for all Indexes.

S4061 is the equal #5 for IMF, top 10% of the breed for Heavy Grain Index (GRN), powerful high growth bull, larger framed with top 1% IMF.

Janie, Byron, Lachie and the Marmalades team do a beautiful job with the watering and feeding on sale days.

A well earned post Sale celebration, Vic Autumn Sale 2022

THE SALE WILL BE HELD AT 'CLAREMONT'

233 COONANS RD, YEA VIC 3717

Lawsons Angus' Bull Unit is located at 233 Coonans Rd, Yea. Claremont is 16km south-west of Yea, 60km north of Whittlesea and 110km north-east of Melbourne Airport. If you are coming from Yea drive south past the Yea Saleyards and turn right into Dairy Creek Rd and left into Coonans Rd. Follow the flags and signs off the Whittlesea-Yea Rd.

SALE CONDITIONS

BUYERS REBATE

All lots will be sold subject to the usual conditions governing auction sales. Rebate of 3% is available to outside agents who attend the sale or introduce their client prior to Sale day, and settle on behalf of clients within 7 days. Please email introductions to lawsons@lawsonsangus.com.au. If agents are nominated to settle on behalf of clients on Sale day and do not attend 1% rebate will be applied.

DELIVERY OF SALE BULLS

Lawsons Angus and Selling Agents will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Buyers must organise cartage of bulls at their own expense.

REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request. Non-transfer commercial bulls are denoted 'NT' or 'COM' status.

HEALTH STATUS OF BULLS

All bulls have been independently semen and morphology tested including a physical evaluation of the bulls reproductive tract.

All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1, Vibriosis, Pesti Guard (BVD), tick fever and 3-day sickness.

3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge. If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. provide you with a satisfactory replacement if available, or
2. issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

The Lawsons Angus 3 year bull guarantee is not a life insurance policy. Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. We recommend you insure animals against injury. An insurance service will be available on Sale day.

This guarantee is in addition to normal terms and conditions governing auction sales, and as such the discretion and final decision as to issuing a credit will be with the vendor. Any credit will be limited to bull purchase price less salvage value and not include any costs, damages or loss of income incurred as a result of claims under this guarantee.

OUR 3 YEAR BULL GUARANTEE IS THE GREATEST WARRANTY PROVIDED BY ANY SEEDSTOCK HERD IN AUSTRALIA.

CALVING EASE

We have included a red tick in summary pages and individual catalogue information for bulls that we recommend are suitable to use in most situations over yearling heifers. Most of these bulls are ≥ 1.8 for Calving Ease Direct (DIR) and less than breed average birth weight (≤ 4.3 Birth Weight EBVs). We believe this combination gives you the best risk management guide for selecting bulls to mate yearling heifers and simplifies the information so that you can focus on improving other key economic traits. We urge breeders not to over analyse this information and narrow down selection options as is often the case. There are a few exceptions that we have made to these EBVs criteria, but we believe these bulls to also be safe calving ease candidates. Individual herds may use bulls outside this recommended range depending on their maternal herd and production system, but these are our recommended 'safe' heifer specifications and they are working well for commercial beef herds.

We also recommend you talk to us about helping to develop a pre-calving heifer **management** plan that can be used in conjunction with these EBV specifications to achieve predictable calving ease and rebreeding results for two year old heifers. Remember management of heifers is equally important as the **genetic** potential of the sires and dams to optimise calving and reproductive performance of heifers.

DISCLAIMER

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, neither the vendor, Angus Australia or the selling agents assume any responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information. Buyers should also note other Sale Conditions listed on this page including those under "3 Year Guarantee".

A BRIEF DESCRIPTION OF EBVS AND \$INDEX VALUES

The following is a brief description of EBVs and \$Index values and Accuracies. For a more detailed explanation please refer to Angus Society of Australia web site (www.angusaustralia.com.au).

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or it's progeny, or relatives) then the accuracy of it's EBVs for particular traits will increase.

CALVING EASE DIR (%)
~ Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

CALVING EASE DTRS (%)
~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS)
~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG) ~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300kg carcase.

INTRA-MUSCULAR FAT % (IMF%) ~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

ANGUS BREEDING INDEX
~ Estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals

that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

DOMESTIC INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

HEAVY GRAIN INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

HEAVY GRASS INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers.
